

AZ-104T00: Microsoft Azure Administrator Training

Duration: 4 Days

Course Content:

AZ-104T00: Microsoft Azure Administrator Training is designed to teach IT professionals the right methodologies to manage their Azure subscriptions, implement storage solutions, build, and scale digital machines, and configure digital networking. This technical course is ideal for Azure administrators responsible for managing and monitoring computation, governance, identity, and digital networks in a cloud network. AZ-104T00: Microsoft Azure Administrator helps professionals connect Azure and on-premises sites, apply Azure active directory, monitor solutions, secure identities, and manage network traffic more effectively. Our Enterprise training program allows a team upgrade with a skill set that leads to the firm's overall development. By the end of the course, you will know how to manage your accounts, use role-based access control, and implement Azure policies.

This training is designed based on the objectives of the course variant AZ-104T00-A

Prerequisites for this training

- Understanding of on-premises virtualization technologies, including VMs, virtual networking, and virtual hard disks.
- Understanding of network configuration, including TCP/IP, Domain Name System (DNS), virtual private networks (VPNs), firewalls, and encryption technologies.
- Understanding of Active Directory concepts, including domains, forests, domain controllers, replication, Kerberos protocol, and Lightweight Directory Access Protocol (LDAP).
- Understanding of resilience and disaster recovery, including backup and restore operations.
- Azure administrators and engineers
- System administrators interested in Azure implementation
- IT professionals

Who should attend this course?

The Microsoft Azure Administrator Training is for Azure Administrators. Azure Administrators implement, monitor, and manage various cloud services, virtual networks, and compute cloud capabilities. They communicate with vendors to provide optimal solutions to end-users for cloud applications and give strategic recommendations to ensure the provision, monitor, size, and adjust resources as needed.

What you will learn

- Learning how to manage your subscriptions and accounts by implementing Azure policies and use Role-Based Access Control
- Learning how to use Azure Active Directory to secure identities and implement users and groups
- Learning how to manage infrastructure with tools an Azure Administrator uses
- Exploring intersite connectivity features such as Virtual Network Gateways, Site-to-Site Connections, and VNet Peering
- Understanding basic virtual networking concepts
- Learning about basic storage features
- Learning about network traffic strategies
- Learning about Azure virtual machines

- Learning about backing up files and folders including virtual machine backups
- Learning administrators serverless computing features
- Learning how to monitor your Azure infrastructure

Curriculum

Module 1: Identity

In this module, you will learn how to secure identities with Azure Active Directory and implement users and groups.

Lesson

- Azure Active Directory
- Users and Groups
- Lab: Manage Azure Active Directory Identities

After completing this module, students will be able to:

- Secure and manage identities with Azure Active Directory.
- Implement and manage users and groups.

Module 2: Governance and Compliance

In this module, you will learn about managing your subscriptions and accounts, implementing Azure policies, and using Role-Based Access Control.

Lesson

- Subscriptions and Accounts
- Azure Policy
- Role-based Access Control (RBAC)

Lab: Manage Subscriptions and RBAC

Lab: Manage Governance via Azure Policy

After completing this module, students will be able to:

- Implement and manage Azure subscriptions and accounts.
- Implement Azure Policy, including custom policies.
- Use RBAC to assign permissions.

Module 3: Azure Administration

In this module, you will learn about the tools an Azure Administrator uses to manage their infrastructure. This includes the Azure Portal, Cloud Shell, Azure PowerShell, CLI, and Resource Manager Templates. This module includes:

Lesson

- Azure Resource Manager
- Azure Administrator Tools
- ARM Templates

Lab: Manage Azure resources by Using the Azure Portal

Lab: Manage Azure resources by Using ARM Templates

Lab: Manage Azure resources by Using Azure PowerShell (optional)

Lab: Manage Azure resources by Using Azure CLI (optional)

After completing this module, students will be able to:

- Leverage Azure Resource Manager to organize resources.
- Use the Azure Portal and Cloud Shell.
- Use Azure PowerShell and CLI.
- Use ARM Templates to deploy resources.

Module 4: Virtual Networking

In this module, you will learn about basic virtual networking concepts like virtual networks and subnetting, IP addressing, network security groups, Azure Firewall, and Azure DNS.

Lesson

- Virtual Networks
- Network Security groups
- Azure Firewall
- Azure DNS

Lab: Implement Virtual Networking

After completing this module, students will be able to:

- Implement virtual networks and subnets.
- Configure network security groups.
- Configure Azure Firewall.
- Configure private and public DNS zones.

Module 5: Intersite Connectivity

In this module, you will learn about intersite connectivity features including VNet Peering, Virtual Network Gateways, and Site-to-Site Connections.

Lesson

- VNet Peering
- VPN Gateway Connections
- ExpressRoute and Virtual WAN

Lab: Implement Intersite Connectivity

After completing this module, students will be able to:

- Configure VNet Peering.
- Configure VPN gateways.
- Choose the appropriate intersite connectivity solution.

Module 6: Network Traffic Management

In this module, you will learn about network traffic strategies including network routing and service endpoints, Azure Load Balancer, and Azure Application Gateway.

Lesson

- Network Routing and Endpoints
- Azure Load Balancer
- Azure Application Gateway

Lab: Implement Traffic Management

After completing this module, students will be able to:

- Configure network routing including custom routes and service endpoints.

- Configure an Azure Load Balancer.
- Configure and Azure Application Gateway.

Module 7: Azure Storage

In this module, you will learn about basic storage features including storage accounts, blob storage, Azure files and File Sync, storage security, and storage tools.

Lesson

- Storage Accounts
- Blob Storage
- Storage Security
- Azure Files and File Sync
- Managing Storage

Lab: Manage Azure storage

After completing this module, students will be able to:

- Create Azure storage accounts.
- Configure blob containers.
- Secure Azure storage.
- Configure Azure files shares and file sync.
- Manage storage with tools such as Storage Explorer.

Module 8: Azure Virtual Machines

In this module, you will learn about Azure virtual machines including planning, creating, availability and extensions.

Lesson

- Creating Virtual Machines
- Virtual Machine Availability
- Virtual Machine Extensions

Lab: Manage virtual machines

After completing this module, students will be able to:

- Plan for virtual machine implementations.
- Create virtual machines.
- Configure virtual machine availability, including scale sets.
- Use virtual machine extensions.

Module 9: PaaS Compute Options

In this module, you will learn how to administer serverless computing features like Azure App Service, Azure Container Instances, and Kubernetes.

Lesson

- Azure App Service Plans
- Azure App Service
- Container Services
- Azure Kubernetes Service

Lab: Implement Web Apps

Lab: Implement Azure Container Instances

Lab: Implement Azure Kubernetes Service

After completing this module, students will be able to:

- Create an app service plan.
- Create a web app.
- Implement Azure Container Instances.
- Implement Azure Kubernetes Service.

Module 10: Data Protection

In this module, you will learn about backing up files and folders, and virtual machine backups.

Lesson

- File and Folder Backups
- Virtual Machine Backups

Lab: Implement Data Protection

After completing this module, students will be able to:

- Backup and restore file and folders.
- Backup and restore virtual machines.

Module 11: Monitoring

In this module, you will learn about monitoring your Azure infrastructure including Azure Monitor, alerting, and log analytics.

Lesson

- Azure Monitor
- Azure Alerts
- Log Analytics
- Network Watcher

Lab: Implement Monitoring

After completing this module, students will be able to:

- Use Azure Monitor.
- Create Azure alerts.
- Query using Log Analytics.
- Use Network Watcher.
