

Redefining The Skills

AZ-700T00: DESIGNING AND IMPLEMENTING MICROSOFT AZURE NETWORKING SOLUTIONS TRAINING

Duration: 3 Days

Course Description

AZ-700T00: Designing and Implementing Microsoft Azure Networking Solution Training aims to provide a core understanding of topics such as Azure networking, ExpressRoute, networking security, and network security.

This course is for professionals who want to upskill their journey in learning more about Azure Networking. It also deals with the procedure of hybrid networking connections, network routing, load balancing traffic, and network security & monitoring.

This training is designed based on the objectives of the course variant AZ 700T00 A.

Who should attend this course?

- Any professional working as a Network Engineer looking to specialize in Azure Networking. This course deals with implementing core Azure Networking infrastructure, hybrid networking connections, private access, and network routing.
- The Azure Network Engineer pursuing this course will manage networking solutions for optimal performance, resiliency, scale, and security.
- Given below are professionals who can use Designing and Implementing Microsoft Azure Networking Solution Training to upskill their current positions:
 - Cloud Solutions Architects
 - IT Security Professionals
 - Infrastructure Engineers
 - Network Engineers
 - Technical Consultants
 - System Integrators
 - IT Project Managers

What you will learn

- Learning to design, implement, and manage hybrid network connections.
- Learning how to design and implement core Azure networking infrastructure.
- Learning to design and implement routing and load balancing in Azure
- Learning how to secure and monitor networks
- Learning how to design and implement private access to azure services

Prerequisites

- Basic understanding of on-premises virtualization technologies, including VMs, virtual networking, and virtual hard disks.
- Understanding of network configuration, which includes TCP/IP, Domain Name System (DNS), Virtual Private Network (VPS), Firewalls, and encryption technologies.
- Basic understanding of software-defined networking.
- Basic knowledge of hybrid network connectivity methods, such as VPN.
- Basic knowledge of resilience and disaster recovery, including high availability and restore operations.
- Professionals working as Network Engineers starting this role with experience in enterprise networking, on-premises or cloud infrastructure, and network security.

Recommended:

- AZ-900T00: Microsoft Azure Fundamentals
- AZ-104T00: Microsoft Azure Administrator

Curriculum**Module 1: Introduction to Azure Virtual Networks**

In this module, you will learn how to design and implement fundamental Azure Networking resources such as virtual networks, public and private IPs, DNS, virtual network peering, routing, and Azure Virtual NAT.

- Explore Azure Virtual Networks
- Configure public IP services
- Design name resolution for your Virtual Network
- Enable Cross-VNet connectivity with peering
- Implement virtual network traffic routing
- Configure internet access with Azure Virtual NAT

Lab: Exercise: design and implement a Virtual Network in Azure

Lab: Exercise: configure DNS settings in Azure

Lab: Exercise: connect two Azure Virtual Networks using global virtual network peering

After completing this module, students will be able to:

- Implement virtual networks
- Configure public IP services
- Configure private and public DNS zones
- Design and implement cross-VNET connectivity
- Implement virtual network routing
- Design and implement an Azure Virtual Network NAT

Module 2: Design and Implement Hybrid Networking

In this module, you will learn how to design and implement hybrid networking solutions such as Site-to-Site VPN connections, Point-to-Site VPN connections, Azure Virtual WAN and Virtual WAN hubs.

- Design and implement Azure VPN Gateway
- Connect networks with Site-to-site VPN connections
- Connect devices to networks with Point-to-site VPN connections
- Connect remote resources by using Azure Virtual WANs
- Create a network virtual appliance (NVA) in a virtual hub

Lab: Exercise: create and configure a virtual network gateway

Lab: Exercise: create a Virtual WAN by using Azure Portal

After completing this module, students will be able to:

- Design and implement a site-to-site VPN connection
- Design and implement a point-to-site VPN connection
- Design and implement Azure Virtual WAN Resources

Module 3: Design and implement Azure ExpressRoute

In this module you will learn how to design and implement Azure ExpressRoute, ExpressRoute Global Reach, ExpressRoute FastPath and ExpressRoute Peering options.

- Explore Azure ExpressRoute
- Design an ExpressRoute deployment
- Configure peering for an ExpressRoute deployment
- Connect an ExpressRoute circuit to a VNet
- Connect geographically dispersed networks with ExpressRoute global reach
- Improve data path performance between networks with ExpressRoute FastPath
- Troubleshoot ExpressRoute connection issues

Lab: Exercise: configure an ExpressRoute gateway

Lab: Exercise: provision an ExpressRoute circuit

After completing this module, students will be able to:

- Design and implement Expressroute
- Design and implement Expressroute Direct
- Design and implement Expressroute FastPath

Module 4: load balancing non-HTTP(S) traffic in Azure

In this module, you will learn how to design and implement load balancing solutions for non-HTTP(S) traffic in Azure with Azure Load balancer and Traffic Manager.

- Explore load balancing
- Design and implement Azure load balancer using the Azure portal
- Explore Azure Traffic Manager

Lab: Exercise: create and configure an Azure load balancer

Lab: Exercise: create a Traffic Manager profile using the Azure portal

After completing this module, students will be able to:

- Design and implement Azure Load Balancers
- Design and implement Azure Traffic Manager

Module 5: Load balancing HTTP(S) traffic in Azure

In this module, you will learn how to design and implement load balancing solutions for HTTP(S) traffic in Azure with Azure Application Gateway and Azure Front Door.

- Design Azure application gateway
- Configure Azure application gateway
- Design and configure Azure front door

Lab: Exercise: deploy Azure application gateway

Lab: Exercise: create a front door for a highly available web application

After completing this module, students will be able to:

- Design and implement Azure Application Gateway
- Implement Azure Front Door

Module 6: Design and implement network security

In this module, you will learn to design and implement network security solutions such as Azure DDoS, Azure Firewalls, Network Security Groups, and Web Application Firewall.

- Secure your virtual networks in the Azure portal
- Deploy Azure DDoS Protection by using the Azure portal
- Deploy Network Security Groups by using the Azure portal

- Design and implement Azure Firewall
- Working with Azure Firewall Manager
- Implement a Web Application Firewall on Azure Front Door

Lab: Exercise: configure DDoS Protection on a virtual network using the Azure portal

Lab: Exercise: deploy and configure Azure Firewall using the Azure portal

Lab: Exercise: secure your virtual hub using Azure Firewall Manager

After completing this module, students will be able to:

- Configure and monitor an Azure DDoS protection plan
- Implement and manage Azure Firewall
- Implement network security groups
- Implement a web application firewall (WAF) on Azure Front Door

Module 7: Design and implement private access to Azure Services

In this module, you will learn to design and implement private access to Azure Services with Azure Private Link, and virtual network service endpoints.

- Define Private Link Service and private endpoint
- Explain virtual network service endpoints
- Integrate Private Link with DNS
- Integrate your App Service with Azure virtual networks

Lab: Exercise: create an Azure private endpoint using Azure PowerShell

Lab: Exercise: restrict network access to PaaS resources with virtual network service endpoints

After completing this module, students will be able to:

- Define the difference between Private Link Service and private endpoints
- Design and configure private endpoints
- Explain virtual network service endpoints
- Design and configure access to service endpoints
- Integrate Private Link with DNS
- Integrate your App Service with Azure virtual networks

Module 8: Design and implement network monitoring

In this module, you will learn to design and implement network monitoring solutions such as Azure Monitor and Network watcher.

- Monitor your networks with Azure Monitor
- Monitor your networks with Azure Network Watcher

Lab: Exercise: Monitor a load balancer resource by using Azure Monitor

After completing this module, students will be able to:

- Configure network health alerts and logging by using Azure Monitor
- Create and configure a Connection Monitor instance
- Configure and use Traffic Analytics
- Configure NSG flow logs
- Enable and configure diagnostic logging
- Configure Azure Network Watcher
